Put more time into understanding the PHD's algorithm
- focuses on what questions really affected their risk judgement

NHS - Clinical trial triage platform

App is replacing safety assessment

myGrace - suggests & questions from GRIST

Make answering of questions sequential

Breakdown functionality making sure to add value to each requirement

Minimum delivered:
- Interface to machine learning, app drive sequences of question, returns validate evaluation and what steps should next be taken
- Need it to work in real-time and be reliable; trust

• What design issues are there?
• what difficulties have people had integrating into mobile
• What are the motivations of a user?
• Help user get value out of application, like tracking there wellbeing over a number of days, including their activity
